

United Kingdom service

SAMSKIP

Samskip's multimodal network

Samskip operates a Pan European network of shortsea services and multimodal connections. Containers are moved via its reliable sea, road, rail and barge connections to offer customers efficient transport solutions. The high frequency of the services, the coverage of the multimodal network and the 45ft containers create a reliable, cost efficient as well as sustainable transport solution.

United Kingdom service

Samskip has been serving the United Kingdom for many years and has built up valuable experience, strong local presence as well as an extensive customer base. Thanks to the frequent sailings and well developed hinterland connections, Samskip offers competitive transit times as well as cost efficient transport solutions to and from the United Kingdom. With 10 weekly departures to/from Rotterdam to Grangemouth, Hull and Tilbury, Samskip offers customers maximum country coverage.

The ports are selected for their strategic geographical position and well developed hinterland connections.

- 5x per week to/from Hull
- 4x per week to/from Tilbury
- 1x per week to/from Grangemouth

Shortsea and multimodal connections

The United Kingdom is fully integrated in Samskip's multimodal service network. Samskip offers frequent and reliable short sea services to more than 40 ports in Europe, the Baltic States and Russia. By road, train or barge connections can be made to Benelux, Germany, Iberia, Ireland, Norway, Sweden, Eastern Europe, Russia and other European destinations.

Specialized equipment

Samskip offers a wide range of modern equipment to suit the specific needs of your cargo. The fleet includes 20ft, 40ft and 45ft high cube pallet-wide containers.

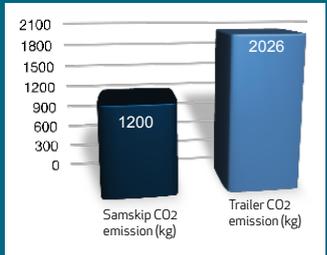

Our temperature controlled 45ft containers are able to safely transport all chilled, cooled or frozen cargo. As the heating/cooling equipment is efficiently integrated in our Samskip Coolboxx reefers these offer the same 33 pallet capacity as the conventional 45ft containers.

20ft, 40ft and 45ft flatracks are offered to transport project or out-of-gauge cargo; ideal to transport all kinds of over-length, over-width and over-height cargo such as slates, marble and steel.

Sustainable transport solution

The environmental advantages of multimodal transport solutions are striking on the United Kingdom route. The example on the right shows that the CO₂ emission when transporting cargo from Leeds (UK) to Rome (IT) can be reduced by just over 820 kg when using a multimodal transport solution.

Local services, customised solutions

To ensure that all customers receive the tailor-made service they need, Samskip has local offices and agents in all regions it operates. Dedicated sales and customer service teams ensure high service standards.

Unique advantages

- Connections to an extensive European multimodal network
- Frequent, reliable and cost-efficient services
- In-depth industry experience and expertise
- Professional and dedicated customer service teams
- Sustainable transport solutions
- Wide range of own equipment: 45ft, 40ft, 20ft containers, curtainsiders, reefers and flatracks
- Door-to-Door and Quay-to-Quay transport
- Optimal control thanks to operating own vessels
- Ability to ship hazardous cargo
- ISO and AEO certified
- User-friendly online services such as EDI and service web
